I have not used the IQPro in earnest yet. Originally. the idea was to replace the DDS VFO in a homebrew 9MHz IF 80M Superhet tx/rx (the Plessey SL600 series design of 1973). I guess it would be possible to re-write the PIC code to generate the correct mixing freqs & display the operating freq on the display, but my knowledge of Micro controller programming is restricted to Parallax Basic on the Basic Stamp.

73,
